Single Room Maternity Revitalization

In an effort to meet a growing community need, Newton Memorial Hospital has made a commitment to improving the birthing experience for our patients and their families by launching a revitalization and enhancement project that will enable us to modernize the hospital's maternity floor.

The revitalization and enhancement plan will take place in two phases with the first phase planned for September 2008 to be completed by December 2008. The second phase revitalization is planned for 2009 which will include updating the operating rooms and related infrastructure.

The first phase will include an upgrade in both interior finishes and furniture and will address the following key areas on the single room maternity floor:

- Replacement and upgrade of furniture in patient rooms and waiting rooms
- Update waiting area to include play/entertainment area for children
- Create suite accommodations in large rooms
- Upgrade sleeping accommodations for families
- Installation of flat screen televisions in patient rooms and waiting areas
- Realignment of nurses station

Generous Community Support *will Make a Difference.*

In the last ten years, the community has partnered with the hospital and the foundation to bring expanded healthcare facilities and services to thousands of our families, friends and neighbors. Pregnancy and childbirth is a time when the majority of women play an active role in choosing how and where they would like to access and use health services. Expectant families 'shop' for their baby's birthplace. They look for medical excellence – which Newton Memorial provides – as well as a modern, aesthetically pleasing environment. Our aim with this project is to ensure that the Newton Memorial Hospital maternity unit continues to develop as the provider of choice for women in our community.
